Training recordings
ECG200, 100 series,
two classes
Random kernels
MiniRocket:
9,996 features
per recording
One thin SVD
exact leave-one-out
scores z_{-i} and held-out
leverages $h_{-i} = d_i/(1 - d_i)$
Calibrate on LOO pairs
choose λ and temperature a
by LOO likelihood;
no held-out data
New recordings
clean
electrode-motion
noise (NSTDB, 6 dB)
Leverage-scaled probabilities
$\hat{p}(y \mid x) = \mathrm{softmax}(a\, z(x)/\sqrt{h(x)/h_{\mathrm{ref}}})$
clean: $h/h_{\mathrm{ref}} = 0.7$, confidence 0.98
noisy: $h/h_{\mathrm{ref}} = 2.3$, confidence 0.85
Triage
most confident recordings:
decided automatically
least confident (budget):
sent to a human reviewer
