Time series
x
Random-kernel
transform
(MiniRocket)
Standardise +
thin SVD
$\Phi_c = USV^\top$
Exact LOO for every λ:
$z_{-i},\ h_{-i} = d_i/(1-d_i)$
Fit λ, a by LOO NLL
(Platt-smoothed targets)
Test point: logits $z(x)$, leverage $h(x) = z^\top A^{-1} z$ (closed form)
$p(y \mid x) = \mathrm{softmax}\big(a\, z(x)/\sqrt{h(x)/h_{ref}}\big)$; jackknife+ sets via exact $f_{-i}(x)$
